

August 2026 status note: live stack and walked-back prize language

Jonathan Simons. This note is the public-facing status record for the Zenodo corpus. Cite this note as 10.5281/zenodo.22050978 after the title on that record is restored. The research line is not paused; this is the public record to publish.

Why the August 2026 action happened

In August 2026, prize-claim language on several June 2026 records was walked back. The walk-back was necessary: those drafts packaged Navier-Stokes, the Riemann hypothesis, and Goldbach as closed, and that packaging does not hold. The walk-back was executed badly. Public titles were stamped on 21 August 2026 so the landing page looked like a crime scene. The files were never unpublished, never tombstoned, and never taken off open access. This pack restores the public face: a clean title, an honest first page, and the errata on page 2.

What still stands (live exploratory stack)

Φ -renormalization (fluids). Q_1 -augmented swirl / Φ -renormalization. Live DOI 10.5281/zenodo.22050974. Not a Clay Navier-Stokes proof.

Route C (RH, exploratory). Operator $1/(\gcd(i,j) \cdot v(ij))$, conditional on two named analytic gaps. Live DOI 10.5281/zenodo.22050963. Not a proof of the Riemann hypothesis.

Ring + SND (Goldbach, conditional). The Goldbach statement remains conditional on the strong night-driver hypothesis. It is not a theorem.

T2 under SND, and Bridge*. These stay as named conditional / derived objects. They are not Millennium closures.

Inverse-GCD / Q_N note (restricted). Definitions and a restricted Rayleigh bound. Live DOI 10.5281/zenodo.22050962. Not a full-spectrum floor and not a proof of RH.

Errata: prize-claim language walked back

The June 2026 records listed below remain published and open. Nothing was deleted. What is walked back is the prize-claim language in those drafts, not the existence of the files. Titles on those records must be restored to the original wording.

Clay Statement B / Navier-Stokes millennium packaging. The June drafts treated a regularity claim as closed. That language is walked back. The Φ -renormalization note is the live fluids object.

Quantum Lens / Q6 Goldbach as a theorem. Goldbach stays conditional on SND. Q6 is not a proof.

Montgomery-Dyson / pair correlation as a finished RH argument. That packaging is walked back. Live RH work is exploratory Route C and the Track B Möbius-GCD attack (obstruction, not a proof).

Three-in-one / $\text{SND} \equiv \text{GNC} \equiv \text{Bridge}$ as closures. Those identities were used as if they closed NS, RH, and Goldbach. They do not. The June drafts that argued that way remain published; the prize language is walked back.

Full-spectrum $\lambda_{\min}(Q_N) > -1/2$ as a RH proof. That bound is not a proof of RH. Inverse-GCD $1/\text{gcd}$ is not the live Route C operator.

Records whose public titles must be restored (files stay up)

On 21 August 2026 some public titles were prefixed. Strip those prefixes and any stray trailing quote. Edit each stamped version URL (concept URLs often show only the latest version).

10.5281/zenodo.20405526 — Global Regularity of the Navier-Stokes Equations on T^3 : Spectral Non-Dispersal, the Ring Lemma, Φ -Renormalization, and the Shell-Conditioned Commutator Estimate

10.5281/zenodo.20269843 — The Quantum Lens: A Spectral Framework Connecting the Millennium Prize Problems

10.5281/zenodo.20405593 — The Montgomery-Dyson Coincidence as a Q6 Prime Lattice Eigenvalue Identity

10.5281/zenodo.20518294 — Route C: Spectral Closure of the Zero-Density Law — Conditional on Two Analytic Gaps

10.5281/zenodo.20518250 — Route C: Spectral Closure of the Zero-Density Law — Conditional on Two Analytic Gaps

10.5281/zenodo.20552400 — A Universal Non-Concentration Principle: $\text{SND} \equiv \text{GNC} \equiv \text{Bridge}$

10.5281/zenodo.20552682 — The Prime Lattice as a Prototype for the BSD Hamiltonian: Rank as Spectral Multiplicity and the Zeta-Function Case of the Birch and Swinnerton-Dyer Conjecture

10.5281/zenodo.20552171 — A Quantum Field Theory on the Prime Manifold: Navier-Stokes, Riemann, and Goldbach Under a Single Hamiltonian

10.5281/zenodo.20552223 — A Quantum Field Theory on the Prime Manifold: Navier-Stokes, Riemann Hypothesis, and Goldbach Under a Single Hamiltonian

10.5281/zenodo.19842060 — Borromean Triads, the Ring Lemma, and Spectral Non-Dispersal

10.5281/zenodo.20272545 — Spectral Non-Concentration Implies Global Regularity for 3D Navier-Stokes on T^3

10.5281/zenodo.20405591 — The Q_N Operator: Self-Adjointness, Spectral Floor, and a Route to the Riemann Hypothesis via Renormalized GCD Eigenvalues

This page is the errata. It is not a tombstone. No Millennium problem is claimed. Domain Architect is a local FRA classifier (inquiry). ChatVault is search. Neither wrote these Zenodo titles.
