

AquaQuartz

Intentional place-water · forever vessel · city pride

Complete brochure: what it is, how a city shows off its water, Lithia and Savannah, whether you need a full treatment train or just a good filter — with real cost ranges — order of operations, money, and how the founder stays protected.

Savannah Place Edition concept — Spanish moss at the neck, little book, quartz-look liner.

1. The whole scope (one page)

The ritual

Tableside water from a named place, poured from a forever stone-and-glass decanter with a neck book. Guest takes the vessel home. No single-use plastic.

The water

Honest place water — not “structured.” Lithia Springs first (heritage mineral). Cities later (Savannah, Nordic, 50 Place Editions). Optional House Sip for contest-level taste.

The object

Earthen body · quartz-look liner · purple/local glass · neck book → website (film, poem/blessing, give-back). Art you keep.

The company

Prime Field Technologies, LLC (or AquaQuartz subsidiary). Trademark, designs, contracts owned by the company. Founder: Jonathan Simons.

We sell art + ritual + place pride + stewardship. Blind sip contests are optional for some editions — not Lithia’s job.

2. Show off your city

Every Place Edition is civic pride in a glass: *this is our water, our vessel, our poem, our give-back*. The guest leaves with a forever object that still says the city’s name on the shelf.

EDITION	WATER STORY	VESSEL CUE	JOB
Lithia Springs (launch)	Historic mineral spring through quartz-bearing granite	Warm river-clay · amethyst glass	Heritage character
Savannah / Lowcountry	Floridan Aquifer + Abercorn Creek — civic pride; past statewide taste win	Ochre / tabby · moss glass · Spanish moss at neck	Hometown soft sip
50 Place Editions	Local spring or city’s best water under contract	Local color on same kit language	License / pride later

City pitch: “Your water, held in art, taken home — money back to your watershed.” Restaurants and tourism boards understand that sentence.

3. Do we even need to process?

Often, no — not the full train. If the city’s source is already decent (Savannah usually is), a good catalytic carbon filter + cold serve removes the crap that makes water taste like pipes: chlorine, chloramine, mild sulfur. That is enough to show off the city honestly.

Default for city / Savannah pilots: catalytic carbon (+ sediment) → chill → quartz vessel.
Only add RO + remineralize if you want a separate “House Sip” SKU engineered to match contest winners — or if local water still loses a blind test after carbon.
Never RO Lithia and still call it Lithia Spring Water.

Two paths

PATH	WHEN	PROMISE
A. Filter the place	City pride editions (Savannah first)	“Our water, cleaned of pipe taste” — still that city’s water
B. House Sip train	Chef wants Evian-class preference wins	“Crafted for taste” — label as purified + minerals
C. True spring	Lithia (and licensed springs)	Leave chemistry alone; serve cold; honest mineral character

4. The tech — what each stage costs

Ballpark retail / restaurant-supply pricing (USD, 2026). Install and local codes extra. Cartridges are ongoing.

Place water
→ sediment prefilter

- catalytic carbon (chlorine / chloramine / mild sulfur taste)
- *optional*: reverse osmosis (flat blank)
- *optional*: remineralize (Ca / Mg / HCO₃)
- chill 4–10 °C
- inert quartz vessel

STAGE	WHAT IT DOES	GEAR (APPROX.)
Sediment	Protects carbon / RO	\$20–80 cartridge · often in combo head
Catalytic carbon	Removes chlorine, chloramine, mild H ₂ S taste/odor	\$350–500 commercial dual head (e.g. Everpure QT-class carbon + catalytic); residential catalytic setups ~
Reverse osmosis	Wipes slate clean → flat water	~\$400–1,500 under-counter; commercial beverage RO ~\$2k–7k+
Remineralize	Puts back Ca / Mg / bicarbonate → TDS ~200–350, pH ~7.2–7.8, low Na	~\$50–200 cartridge / mineral kit on RO product
Chill	4–10 °C — always for preference	Restaurant cooler / ice bath / undercounter chiller \$0–\$1.5k
Quartz vessel	Holds it. No chemistry. Art + brand.	See unit COGS ~\$70–150 goal
UV (optional)	Extra microbe kill only — not a taste filter	~\$100–400

What to buy for a pilot

PILOT KIT	BALLPARK INSTALLED	ENOUGH?
City pride (recommended first) — sediment + catalytic carbon + chill	~\$400–900 gear · +\$150–500 install	Usually yes for Savannah / good municipal water
House Sip — above + RO + remineralize + chill	~\$1.5k–6k depending on commercial vs under-counter	When you want to chase “best in the world” blinds
Lithia spring — source contract + cold serve (no RO)	Water deal + testing; filter only if partner/polish needs it	Yes for heritage SKU

Catalytic carbon alone is the high-leverage spend. Commercial dual carbon + catalytic heads commonly land around \$350–500 before install. That is the piece that makes city water stop smelling like the pool.

Target chemistry (only if you run House Sip)

LEVER	TARGET
TDS	150–400 mg/L (sweet spot ~200–350)
pH	~7.2–7.8
Calcium	~40–100 mg/L
Magnesium	~10–30 mg/L
Bicarbonate	~100–300 mg/L
Sodium	as low as practical
Chlorine odor	none
Serve	cold

Quartz lining / moss / purple glass do not change this chemistry. UV does not remove chlorine or sulfur taste. Carbon does.

5. The vessel & brand kit

Lithia

Heritage mineral ·
Cherokee-country craft
cues · amethyst glass.

Savannah

Tabby / ochre · Spanish
moss at neck · hometown
pride.

Nordic / Place

Same kit language · local
color · local water · local
poem.

- Inert food-safe quartz-look liner (true quartz accent on heroes).
- Neck book → site: source film, blessing or poem, give-back %.
- No medical / structured-water claims. No fake tribal endorsements.

6. Order of operations

1. Protect — LLC owns IP; trademark AquaQuartz; NDAs (~\$1–4k).
2. Lithia deal — water + story rights in writing.
3. Samples — 10–20 vessels (Lithia look) + neck book + simple site (~\$10–25k phase).
4. One restaurant — Savannah or Atlanta/Charleston; catalytic carbon on local water or Lithia cold pour.
5. Learn price / COGS — then 100–200 unit run + insurance.
6. Savannah edition — moss-neck samples; city pride story.

7. Optional House Sip — add RO + remin only if blinds demand it.
8. Place Editions — after Lithia (and ideally Savannah) work.

7. Cost to start · what you can make · the ask

PATH	CAPITAL
Lean to first pilots	~\$20–40k
Full pilot + inventory	~\$40–120k
Investor ask	\$100–200k

Example night: guest ~\$280 (keeps decanter) → restaurant ~45% → brand ~\$154 → kit COGS goal ~\$110. Year one is usually proof (often a loss). Upside: refills, Place licenses, volume.

We're raising \$100,000–\$200,000 for AquaQuartz under Prime Field Technologies, LLC (or a subsidiary).

Use: trademark & contracts · Lithia rights · sample & first-run decanters · catalytic carbon pilots · neck books & site · insurance · 2–3 restaurant pilots (Georgia / nearby).

Start: Lithia first · Savannah hometown next · Place Editions later.

Investor gets: equity in the company that owns the mark, designs, and contracts.

Founder keeps: creative control and enough ownership that the brand still needs Jon.

8. Investor lens (honest)

Soft yes as a small heirloom + anti-plastic hospitality brand, not water tech — if kit COGS can land near \$70–110 (not stay at \$150), trademark is filed, and one venue proves guests will pay. Quotes so far are planning ranges (studio / OEM public norms), not signed bids — get three written quotes before a raise. Volume drops unit cost; hotels, weddings, spas, clubs, and DTC often beat restaurant-only margin. Guest is buying the forever vessel and refusing a throwaway bottle — water must be decent, not the hero. Full teardown: `INVESTOR-TEARDOWN.md` in this folder.

9. Protect the founder

Idea alone isn't property. Trademark AquaQuartz, assign designs to the LLC, sign Lithia / makers / restaurants to the company, keep founder control. Then "great idea — we don't need Jon" is legally false unless they buy the company.

10. One-line freeze

AquaQuartz = named place water + forever quartz vessel + neck book + city pride + give-back.
City editions: catalytic carbon + cold is usually enough. Contest sip: add RO + remineralize as a labeled House Sip. Lithia: leave the spring alone. The vessel is art — not a chemistry lab.
