

The Quantum Lens: A Spectral Framework Connecting the Millennium Prize Problems

Jonathan Simons. This record (10.5281/zenodo.20269843) is a June 2026 exploratory draft. It remains published and citable. The deposit currently holds TeX or a webloc, not a public PDF. This two-page note is the public-facing face to upload as a new version. Leave the original source files in place. Prize-claim language in the source is walked back; see page 2. This page is not a retraction notice.

Why the August 2026 action happened

In August 2026, prize-claim language on several June 2026 records was walked back. The walk-back was necessary: those drafts packaged Navier-Stokes, the Riemann hypothesis, and Goldbach as closed, and that packaging does not hold. The walk-back was executed badly. Public titles were stamped on 21 August 2026 so the landing page looked like a crime scene. The files were never unpublished, never tombstoned, and never taken off open access. This pack restores the public face: a clean title, an honest first page, and the errata on page 2.

Live exploratory stack (cite these, not prize packaging)

Live exploratory stack: Φ -renormalization 10.5281/zenodo.22050974 (not a Clay Navier-Stokes proof); Route C 10.5281/zenodo.22050963 (not a proof of RH); Ring+SND Goldbach remains conditional on SND; T2 under SND and Bridge* stay named derived objects; inverse-GCD note 10.5281/zenodo.22050962 is a restricted Rayleigh bound, not a full-spectrum floor.

Full status note: 10.5281/zenodo.22050978 (restore that record's title to "August 2026 status note: live stack and walked-back prize language" when you upload the replacement PDF).

Page 1 of this record. Errata on the next page. No Millennium problem is claimed.

Errata: prize-claim language walked back

Prize-claim language in this draft does not stand. The file stays published so the walk-back is auditable.

Clay Statement B / Navier-Stokes millennium packaging. The June drafts treated a regularity claim as closed. That language is walked back. The Φ -renormalization note is the live fluids object.

Quantum Lens / Q6 Goldbach as a theorem. Goldbach stays conditional on SND. Q6 is not a proof.

Montgomery-Dyson / pair correlation as a finished RH argument. That packaging is walked back. Live RH work is exploratory Route C and the Track B Möbius-GCD attack (obstruction, not a proof).

Three-in-one / $\text{SND} \equiv \text{GNC} \equiv \text{Bridge}$ as closures. Those identities were used as if they closed NS, RH, and Goldbach. They do not. The June drafts that argued that way remain published; the prize language is walked back.

Full-spectrum $\lambda_{\min}(Q_N) > -1/2$ as a RH proof. That bound is not a proof of RH. Inverse-GCD $1/\text{gcd}$ is not the live Route C operator.

The full restore list is page 2 of the status note 10.5281/zenodo.22050978 and in titles.json in this pack.

This page is the errata. It is not a tombstone. No Millennium problem is claimed. Domain Architect is a local FRA classifier (inquiry). ChatVault is search. Neither wrote these Zenodo titles.
