

Archive Correction Notice

Spectral preprint stack — August 2026

Jonathan Robert Simons
simonsmedicalinnovations@gmail.com

August 2026

This record is kept as dated archive only. Claims in the original files on this DOI are *not* the author's current public claim.

0.1 W

ithdrawn (do not cite as proved)

- Unconditional Navier–Stokes / Statement (B) packaging
- Quantum Lens as a connector that closes Millennium problems
- Q6 dark-state $\Leftrightarrow$ Goldbach
- Montgomery–Dyson “resolved” via Q6
- Three-in-one / Triple Lock unconditional closures
- Full-spectrum floor $\lambda_{\min} > -1/2$ on the named inverse-GCD matrices (numerically false for moderate N)

0.2 W

hat stands instead (corrected notes) Phi-renormalization (augmented / Phi system); Ring Lemma + SND as a *conditional* criterion; T2 shell Gronwall *conditional on SND*; proper Q6 note (definitions + Bridge* single-pair bound + floor withdrawal); Route C *conditional on two analytic gaps*.

See also the status sheet `06.status_errata.pdf` in the author's corrected submit pack (`docs/papers/submit/` on the Ship_it_app repository).

Credit for this DOI: timestamp / history of work. Not submit text.
