

The Quantum Lens: A Spectral Framework Connecting the Millennium Prize Problems

Jonathan Simons. This record (10.5281/zenodo.20269843) is a 2026 exploratory draft. It remains published and citable.¹ The deposit currently holds TeX or a webloc, not a public PDF. This two-page note is the public-facing face to upload as a new version. Leave the original source files in place. This page is not a retraction notice.

Live exploratory stack (cite these, not prize packaging)

Live exploratory stack: Φ -renormalization 10.5281/zenodo.22050974 (not a Clay Navier–Stokes proof); Route C 10.5281/zenodo.22050963 (not a proof of RH); Ring lemma 10.5281/zenodo.22050976 (Goldbach remains conditional on SND); T2 under SND 10.5281/zenodo.22050965 and Bridge* stay named derived objects; inverse-GCD note 10.5281/zenodo.22050962 is a restricted Rayleigh bound, not a full-spectrum floor.

¹ August 2026 prize-claim language walked back; see errata below / page 2 of this file and status note 10.5281/zenodo.22050978.

Errata: prize-claim language walked back

Prize-claim language in this draft does not stand. The file stays published so the walk-back is auditable.

Why the August 2026 action happened

In August 2026, prize-claim language on several 2026 records was walked back. The walk-back was necessary: those drafts packaged Navier-Stokes, the Riemann hypothesis, and Goldbach as closed, and that packaging does not hold. The walk-back was executed badly. Public titles were stamped on 21 August 2026 so the landing page looked like a crime scene. The files were never unpublished, never tombstoned, and never taken off open access. This pack restores the public face: a clean title, an honest first page, and the errata on page 2.

Prize-claim language that does not stand

Clay Statement B / Navier-Stokes millennium packaging. The June drafts treated a regularity claim as closed. That language is walked back. The Φ -renormalization note is the live fluids object.

Quantum Lens / Q6 Goldbach as a theorem. Goldbach stays conditional on SND. Q6 is not a proof.

Montgomery-Dyson / pair correlation as a finished RH argument. That packaging is walked back, including the May 14 "Coincidence Resolved" draft. Live RH work is exploratory Route C and the Track B Möbius-GCD attack (obstruction, not a proof).

Three-in-one / $\text{SND} \equiv \text{GNC} \equiv \text{Bridge}$ as closures. Those identities were used as if they closed NS, RH, and Goldbach. They do not. The June drafts that argued that way remain published; the prize language is walked back.

Full-spectrum $\lambda_{\min}(Q_N) > -1/2$ as a RH proof. That bound is not a proof of RH. Inverse-GCD $1/\text{gcd}$ is not the live Route C operator.

This page is the errata. It is not a tombstone. No Millennium problem is claimed. Domain Architect is a local FRA classifier (inquiry). ChatVault is search. Neither wrote these Zenodo titles.
