

August 2026 status note: live stack and walked-back prize language

Jonathan Simons. This note is the public-facing status record for the Zenodo corpus. Cite this note as 10.5281/zenodo.22050978.¹ The research line is not paused; this is the public record to publish. Page 2 is the errata for walked-back prize-claim language. Public titles should be the original wording.

What still stands (live exploratory stack)

Φ -renormalization (fluids). Q_1 -augmented swirl / Φ -renormalization. Live DOI 10.5281/zenodo.22050974. Not a Clay Navier–Stokes proof.

Route C (RH, exploratory). Operator $1/(\gcd(i,j) \cdot v(ij))$, conditional on two named analytic gaps. Live DOI 10.5281/zenodo.22050963. Not a proof of the Riemann hypothesis.

Ring + SND (Goldbach, conditional). The Goldbach statement remains conditional on the strong night-driver hypothesis. Live Ring DOI 10.5281/zenodo.22050976. It is not a theorem.

T2 under SND, and Bridge*. These stay as named conditional / derived objects. Live T2 DOI 10.5281/zenodo.22050965. They are not Millennium closures.

Inverse-GCD / Q_N note (restricted). Definitions and a restricted Rayleigh bound. Live DOI 10.5281/zenodo.22050962. Not a full-spectrum floor and not a proof of RH.

¹ August 2026 prize-claim language walked back; see errata below / page 2 of this file and status note 10.5281/zenodo.22050978.

Errata: prize-claim language walked back

The 2026 records listed in titles.json remain published and open. Nothing was deleted. What is walked back is the prize-claim language in those drafts, not the existence of the files. Titles on those records must be restored to the original wording (agent path: api_restore_titles.py --apply with a Zenodo personal access token).

Why the August 2026 action happened

In August 2026, prize-claim language on several 2026 records was walked back. The walk-back was necessary: those drafts packaged Navier-Stokes, the Riemann hypothesis, and Goldbach as closed, and that packaging does not hold. The walk-back was executed badly. Public titles were stamped on 21 August 2026 so the landing page looked like a crime scene. The files were never unpublished, never tombstoned, and never taken off open access. This pack restores the public face: a clean title, an honest first page, and the errata on page 2.

Prize-claim language that does not stand

Clay Statement B / Navier-Stokes millennium packaging. The June drafts treated a regularity claim as closed. That language is walked back. The Φ -renormalization note is the live fluids object.

Quantum Lens / Q6 Goldbach as a theorem. Goldbach stays conditional on SND. Q6 is not a proof.

Montgomery-Dyson / pair correlation as a finished RH argument. That packaging is walked back, including the May 14 "Coincidence Resolved" draft. Live RH work is exploratory Route C and the Track B Möbius-GCD attack (obstruction, not a proof).

Three-in-one / $\text{SND} \equiv \text{GNC} \equiv \text{Bridge}$ as closures. Those identities were used as if they closed NS, RH, and Goldbach. They do not. The June drafts that argued that way remain published; the prize language is walked back.

Full-spectrum $\lambda_{\min}(Q_N) > -1/2$ as a RH proof. That bound is not a proof of RH. Inverse-GCD $1/\text{gcd}$ is not the live Route C operator.

This page is the errata. It is not a tombstone. No Millennium problem is claimed. Domain Architect is a local FRA classifier (inquiry). ChatVault is search. Neither wrote these Zenodo titles.
